Prerequisite ENS 204 - Mechanics

Objectives

This course is designed for undergraduate students to (i) develop an understanding of particle and planar rigid body kinematics and kinetics (ii) obtain an understanding of Newton's Laws of Motion, and (iii) gain the ability to apply energy and momentum methods to particles and rigid bodies in planar motion.

Learning Outcomes

At the conclusion of this course, students should be able to:

1. Understand the basic kinematics concepts: displacement, velocity, and acceleration (and their angular counterparts)
2. Draw free-body diagram for a particle or a rigid body in motion
3. Understand the basic concepts of force, momentum, and energy
4. Understand and be able to apply Newton's laws of motion
5. Understand and be able to apply work-energy, impulse-momentum principle
6. Extend all of concepts of linear kinetics to systems in general plane motion
