

PSY 202 – Research Methods and Statistics for Psychology I

Course Syllabus – Fall Semester 2020

Instructor: Dr Rob Booth **Email:** robertbooth@sabanciuniv.edu **Office:** FASS 1019

Synchronous Class Hours: Thu 11:40-12:30 (two additional asynchronous hours per week)

Teaching Assistants (lab sections):

Ecem Erkol (ecem.erkol@sabanciuniv.edu), Bahar Gaser (bahar.gaser@sabanciuniv.edu)

Welcome! In this course, we will learn the basics of scientific method, and basic data analysis. I am not going to assume you know any science, any statistics, or even very much maths. By the end of the course, you should be able to plan, design, and execute simple research projects, and analyse your own data, with little or no supervision. We have students in this course from a variety of backgrounds, interests, and majors. I will try to include examples from all of your areas, but the beauty of the scientific method and statistics is that they're always the same, no matter what you're studying. They also come in very handy in everyday life, especially in the business world, and some of the practical skills you will learn on this course can go right onto your CV.

Tentative schedule (SPSS lab topic in parentheses):

Week 1 – Introduction to the scientific method (entering data into SPSS)

Week 2 – Types of research, terminology, and experimental design (recoding and computing variables)

Week 3 – Types of variables, descriptive statistics, and the normal distribution (descriptive statistics)

Week 4 (no synchronous classes) – Introduction to null hypothesis significance testing, and the independent samples *t*-test (independent samples *t*-test)

Week 5 – Between subjects vs. within subjects designs (paired samples *t*-test)

Week 6 – Between subjects one-way ANOVA (between subjects one-way ANOVA)

Week 7 – MIDTERM EXAM (no lab this week)

Week 8 – Post hoc and a priori testing (post hoc and a priori testing)

Week 9 – Manipulation, measurement, and control (post hoc and a priori testing)

Week 10 – Repeated measures one-way ANOVA (one-way repeated measures ANOVA)

Week 11 – Research ethics (one-way repeated measures ANOVA)

Week 12 – Correlation (correlations)

Week 13 (no synchronous classes) – Effect size, confidence intervals, and power (effect size and confidence intervals)

Week 14 – Revision

Assessment

There are three ways to earn points: midterm, final, and lab attendance. You can also earn bonus points by participating in staff research studies – these bonus points are called *Research Points*. I shall use the standard Sabanci University grade catalogue, you can find a copy of this on the syllabus page of our SUCourse.

Midterm exam (40%) – this will consist of short-answer questions. It will cover topics from Week 1 to Week 6. The midterm will happen in our regular lecture time, in Week 7; i.e., at **11:40 on 19th November**.

Final exam (50%) – this will also consist of short-answer questions. It will cover topics from Week 8 to Week 14, but bear in mind that these topics are based on, and build upon, the earlier topics. The final will happen during the University's scheduled finals period.

Lab attendance (10%) – your attendance to your weekly lab session is mandatory; new information will be taught during lab sessions, and you will practice crucial computer

skills which we cannot assess during the exams. You therefore receive points based on your lab attendance.

Research Points – Students can optionally serve as participants in research that is run by Sabanci University researchers. By participating in research, you can get extra points. For this course, you will be able to earn up to 5 Research Points (1 Point equals up to 30 minutes of research participation). These 5 Research Points will be converted to 5 points added to your overall total at the end of the semester. More information on the available research projects will be provided during the semester.

You will be able to sign up for the experiments and get your research participation credits through the online Sona system at <http://sabanciuniv.sona-systems.com>. Please carefully read the Guide for Students: Sabanci University Research Points System (Sona), available on the PSY202 SUCourse, on the ‘Syllabus’ page.

Study participation is entirely voluntary. Research Points are bonus points, you can still get 100% on your course without participating at all. If you wish to earn bonus points but do not want to participate in studies, each study has an alternative bonus homework assignment you can do, worth the same number of Research Points. Please ask the ‘PI’ (Principle Investigator) of that particular study for details. Each study’s PI is indicated on the Sona page for that study.
