

CS 303 - Logic and Digital System Design

Spring 2023-2024

Instructor: Ayhan Bozkurt, Room: FENS-1047, ext. 9537, e-mail: abozkurt@sabanciuniv.edu

Catalog Data: Number systems and conversion, Boolean algebra, the assertion level concept; minterm and maxterm expansions, Karnaugh maps, and Quine McCluskey minimization, combinatorial logic circuit design, NAND and NOR gate based design. State machines and sequential circuits flip-flops, minimization of state tables, state assignment. Higher-level digital system design using SSI-MSI blocks such multiplexers/decoders, adders, memory and programmable gate arrays; bus oriented systems. Asynchronous sequential circuits, flow tables, timing hazards.

Textbook:

- M. Morris Mano and Michael D. Ciletti. Digital Design, 5e/6e, Pearson.

Computer Usage: Logic Circuit Simulators / FPGA Development Tools

- Digital : <https://github.com/hneemann/Digital>
- The Tang Nano 9K : <https://wiki.sipeed.com/hardware/en/tang/Tang-Nano-9K/Nano-9K.html>

Goals: To develop the engineering skills of the students to analyze and design digital systems.

Course Outline:

- Number Systems & Arithmetic
- Boolean Algebra & Logic Operations
- Gate-Level Minimization
- Analysis & Design of Combinational Logic Circuits
- Analysis & Design of Synchronous Sequential Logic Circuits
- Registers & Counters
- Design with Algorithmic State Machines (ASM)
- Memory & Design with Programmable Logic

General Rules

- Homework and lab assignments are announced one week before the deadline.
- Submission deadlines are never postponed.
- Laboratory sessions might be attended in groups of two. No group shuffling.
- No makeups for laboratory sessions.
- Single comprehensive exam makeup at the end of the semester (for up to 2 exams.)
- A minimum grade of 25/100 from the final exam to pass CS303.

Grading: Midterms 40% (20% each); Lab assignments & Project 25%; HWs 5%; Final 30%.
